3LCD DATA PROJECTOR TLP450E, TLP451E TLP650E, TLP651E TLP650U, TLP651U TLP650U, TLP651U

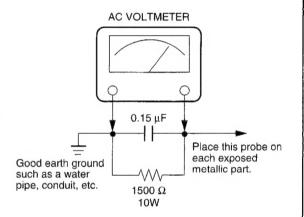

TLP451, TLP651

SAFETY PRECAUTION

WARNING: Service should not be attempted by anyone unfamiliar with the necessary precautions on this projector. The following are the necessary precautions to be observed before servicing this chassis.

- 1. An isolation Transformer should be connected in the power line between the projector and the AC line before any service is performed on the projector.
- 2. When replacing a chassis in the cabinet, always be certain that all the protective devices are put back in place, such as; non-metallic control knobs, insulating covers, shields, isolation resistor-capacitor network etc.
- 3. Before returning the set to the customer, always perform an AC leakage current check on the exposed metallic parts of the cabinet, such as terminals, screwheads, metal overlays, control shafts etc. to be sure the set is safe to operate without danger of electrical shock. Plug the AC line cord directly into a AC outlet (do not use a line isolation transformer during this check). Use an AC voltmeter having 5000Ω per volt or more sensitivity in the following manner: Connect a 1500Ω 10W resistor, paralleled by a 0.15 μF, AC type

capacitor, between a known good earth ground (water pipe, conduit, etc.) and the exposed metallic parts, one at a time. Measure the AC voltage across the combination of 1500Ω resistor and $0.15~\mu F$ capacitor. Reverse the AC plug at the AC outlet and repeat AC voltage measurements for each exposed metallic part. Voltage measured must not exceed 5.25V(rms). This corresponds to 3.5 mA(AC). Any value exceeding this limit constitutes a potential shock hazard and must be corrected immediately.

PRODUCT SAFETY NOTICE

Many electrical and mechanical parts in this chassis have special safety-related characteristics. These characteristics are often passed unnoticed by a visual inspection and the protection afforded by them cannot necessarily be obtained by using replacement components rated for higher voltage, wattage, etc. Replacement parts which have these special safety characteristics are identified in this manual and its supplements; electrical components having such features are identified by the international hazard symbols on the schematic diagram and the parts list.

Before replacing any of these components, read the parts list in this manual carefully. The use of substitute replacement parts which do not have the same safety characteristics as specified in the parts list may create shock, fire or other hazards.

ULTRAVIOLET DANGER IN SERVICE MODE -

Eye damage may result from directly viewing the light produced by the lamp used in this product. Always turn off lamp before opening this cover. Ultraviolet radiation eye protection required during servicing.

SAFETY PRECAUTIONS

The lightning flash with arrowhead symbol, within an equilateral triangle, is intended to alert the user to the presence of uninsulated "dangerous voltage" within the product's enclosure that may be of sufficient magnitude to constitute a risk of electric shock to persons.

The exclamation point within an equilateral triangle is intended to alert the user to the presence of important operating and maintenance (servicing) instructions in the literature accompanying the appliance.

WARNING: TO REDUCE THE RISK OF FIRE OR ELECTRIC SHOCK, DO NOT EXPOSE THIS APPLIANCE TO RAIN OR MOISTURE. DANGEROUS HIGH VOLTAGES ARE

APPLIANCE TO RAIN OR MOISTURE. DANGEROUS HIGH VOLTAGES ARE PRESENT INSIDE THE ENCLOSURE. DO NOT OPEN THE CABINET. REFER

SERVICING TO QUALIFIED PERSONNEL ONLY.

CAUTION: Laser beam is emitted when the laser button of the remote control is pressed. Do not

look from the front of the remote control. Do not face toward a person or to a mirror.

<TLP450U, TLP451U, TLP650U and TLP651U>

FCC Radio Frequency Interference Statement

Note:

This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiates radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his

own expense.

WARNING: Changes or modifications made to this equipment, not expressly approved by

Toshiba, or parties authorized by Toshiba, could void the user's authority to operate

the equipment.

Notice: This Class A digital apparatus complies with Canadian ICES-003.

Cet appareil numérique de la classe A est conforme à la norme NMB-003 du

Canada.

IMPORTANT PRECAUTIONS

- Save Original Packing Materials

The original shipping carton and packing materials will come in handy if you ever have to ship your LCD projector. For maximum protection, repack the set as it was originally packed at the factory.

- Avoid Volatile Liquid

Do not use volatile liquids, such as an insect spray, near the unit. Do not leave rubber or plastic products touching the unit for a long time. They will mar the finish.

- Moisture Condensation

Never operate this unit immediately after moving it from a cold location to a warm location. When the unit is exposed to such a change in temperature, moisture may condense on the crucial internal parts. To prevent the unit from possible damage, do not use the unit for at least 2 hours when there is an extreme or sudden change in temperature.

Retain this information for future reference.

IMPORTANT SAFETY INSTRUCTIONS

CAUTION: PLEASE READ AND OBSERVE
ALL WARNINGS AND
INSTRUCTIONS GIVEN IN THIS
OWNER'S MANUAL AND THOSE
MARKED ON THE UNIT. RETAIN
THIS BOOKLET FOR FUTURE

REFERENCE.

This set has been designed and manufactured to assure personal safety. Improper use can result in electric shock or fire hazard. The safeguards incorporated in this unit will protect you if you observe the following procedures for installation, use and servicing. This unit is fully transistorized and does not contain any parts that can be repaired by the user.

DO NOT REMOVE THE CABINET COVER, OR YOU MAY BE EXPOSED TO DANGEROUS VOLTAGE. REFER SERVICING TO QUALIFIED SERVICE PERSONNEL ONLY.

1. Read Owner's Manual

After unpacking this product, read the owner's manual carefully, and follow all the operating and other instructions.

2. Power Sources

This product should be operated only from the type of power source indicated on the marking label. If you are not sure of the type of power supply to your home, consult your product dealer or local power company. For products intended to operate from battery power, or other sources, refer to the operating instructions.

3. Source of Light

Do not look into the lens while the lamp is on. The strong light from the lamp may cause damage to your eyes or sight.

4. Ventilation

Openings in the cabinet are provided for ventilation and to ensure reliable operation of the product and to protect it from overheating, and these openings must not be blocked or covered. The openings should never be blocked by placing the product on a bed, sofa, rug or other similar surface. This product should not be placed in a built-in installation such as a bookcase or rack unless proper ventilation is provided or the manufacturer's instructions have been adhered to.

IMPORTANT SAFETY INSTRUCTIONS

5. Heat

The product should be situated away from heat sources such as radiators, heat registers, stoves, or other products (including amplifiers) that produce heat.

7. Cleaning

Unplug this product from the wall outlet before cleaning. Do not use liquid cleaners or aerosol cleaners. Use a damp cloth for cleaning.

9. Overloading

Do not overload wall outlets; extension cords, or integral convenience receptacles as this can result in a risk of fire or electric shock.

6. Water and Moisture

Do not use this product near water – for example, near a bath tub, wash bowl, kitchen sink, or laundry tub; in a wet basement; or near a swimming pool and the like.

8. Power-Cord Protection

Power-supply cords should be routed so that they are not likely to be walked on or pinched by items placed upon or against them, paying particular attention to cords at plugs, convenience receptacles, and the point where they exit from the product.

10. Lightning

For added protection for this product during storm, or when it is left unattended and unused for long periods of time, unplug it from the wall outlet.

This will prevent damage to the product due to lightning and power-line surges.

IMPORTANT SAFETY INSTRUCTIONS

11. Object and Liquid Entry

Never push objects of any kind into this product through openings as they may touch dangerous voltage points or short-out parts that could result in a fire or electric shock. Never spill liquid of any kind on the product.

12. Do not place the product vertically

Do not use the product in the upright position to project the pictures at the ceiling, or any other vertical positions. It may fall down and dangerous.

13. Stack Inhibited

Do not stack other equipment on this product or do not place this product on the other equipment.

Top and bottom plates of this product develops heat and may give some undesirable damage to other unit.

14. Attachments

Do not use attachments not recommended by the product manufacturer as they may cause hazards.

15. Accessories

Do not place this product on an unstable cart, stand, tripod, bracket, or table. The product may fall, causing serious injury to a child or adult, and serious damage to the product. Use only with a cart, stand, tripod, bracket, or table recommended by the manufacturer, or sold with the product. Any mounting of the product should follow the manufacturer's instructions, and should use a mounting accessory recommended by the manufacturer.

A product and cart combination should be moved with care. Quick stops, excessive force, and uneven surfaces may cause the product and cart combination to overturn.

IMPORTANT SAFETY INSTRUCTIONS

16. Damage Requiring Service

Unplug this product from the wall outlet and refer servicing to qualified service personnel under the following conditions:

- a) When the power-supply cord or plug is damaged.
- b) If liquid has been spilled, or objects have fallen into the product.
- If the product has been exposed to rain or water.
- d) If the product does not operate normally by following the operating instructions. Adjust only those controls that are covered by the operating instructions as an improper adjustment of other controls may result in damage and will often require extensive work by a qualified technician to restore the product to its normal operation.
- e) If the product has been dropped or damaged in any way.
- f) When the product exhibits a distinct change in performance – this indicates a need for service.

17. Servicing

Do not attempt to service this product yourself as opening or removing covers may expose you to dangerous voltage or other hazards. Refer all servicing to qualified service personnel.

18. Replacement Parts

When replacement parts are required, be sure the service technician has used replacement parts specified by the manufacturer or have the same characteristics as the original part. Unauthorized substitutions may result in fire, electric shock, or other hazards. (Replacement of the lamp only should be made by users.)

19. Safety Check

Upon completion of any service or repairs to this product, ask the service technician to perform safety checks to determine that the product is in proper operating condition.

Do not get your hands between the camera arm and the main unit when setting the camera arm back in its original position.

To avoid injury, be careful not to get your hands caught when setting the camera arm back in its original position. Families with children should be particularly careful.

IMPORTANT SAFETY INSTRUCTIONS

21. Do not carry by the camera arm.

Do not carry the projector by the camera arm.

Doing so can result in damage or injury.

Do not leave documents on the unit for long periods of time while using the document imaging function.

Do not leave texts, papers or other documents for projection on the unit for long periods of time. The heat could erase the letters on a thermal paper.

23. Do not move the projector while the arm is still erect.

Always store the arm back in position when moving the projector. Otherwise injury or damage may result.

SECTION 1 PART REPLACEMENT AND ADJUSTMENT PROCEDURES

1. LOCATION OF MAIN PARTS

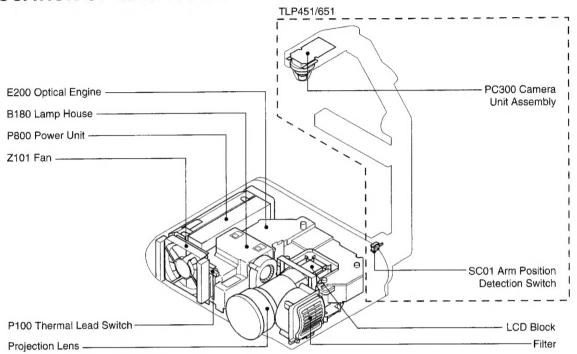

Fig. 1-1-1

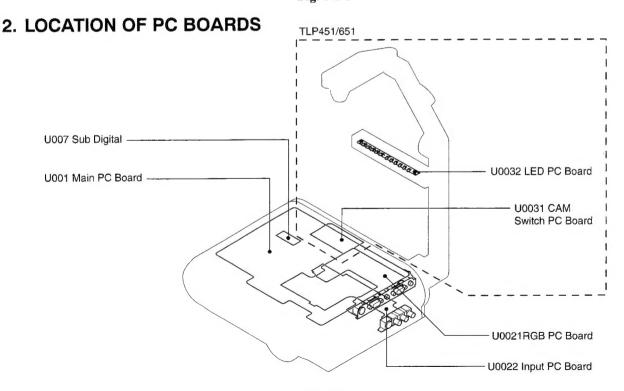

Fig. 1-2-1

CAUTIONS BEFORE STARTING SERVICING

Electronic parts are susceptible to static electricity and may easily damaged, so do not forget to take a proper grounding treatment as required.

Many screws are used inside the unit. To prevent missing, dropping, etc. of the screws, always use a magnetized screwdriver in servicing. Several kinds of screws are used and some of them need special cautions. That is, take care of the tapping screws securing molded parts and fine pitch screws used to secure metal parts. If they are used improperly, the screw holes will be easily damaged and the parts can not be fixed.

3. REPLACEMENT OF MECHANICAL PARTS

3-1. Camera Arm Assembly (Only for TLP451/651)

- 1. Remove six screws (1) and remove the camera arm assembly (2).
- 2. Remove the connector (3) connecting to the main unit.

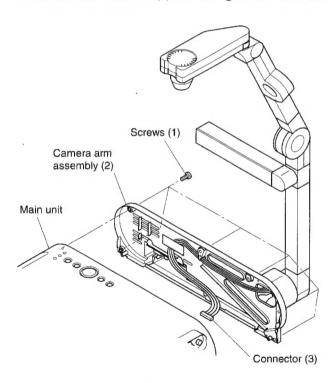

Fig. 1-3-1

3-2. Lamp Assembly

- 1. Loosen two screws (1) and remove the cover (2).
- 2. Pull down the handle to remove the lamp assembly (3).

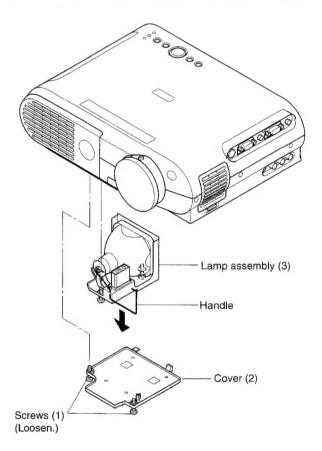

Fig. 1-3-2

3-3. Front Cover and Top Cover

- 1. Remove two screws (1) and remove the front cover (2) by sliding the portion A pushed with a thin bar in the arrow B direction.
- 2. Remove nine screws (3).
- 3. Push the handle (4) to one side and remove the top cover (5) by rotating in the arrow C direction.

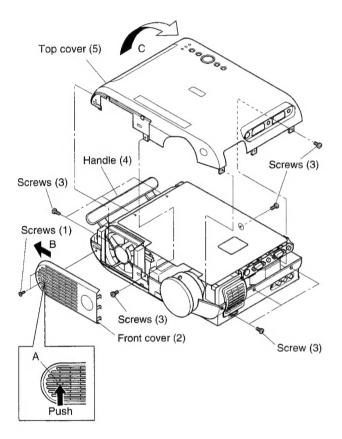

Fig. 1-3-3

3-4. Main PC Board

- 1. Remove four connectors (2) and five FFCs (3) connected to the main PC board (1).
- 2. Remove seven screws (4).
- 3. Lift the main PC board (1) upward and remove the main PC board (1) from the RGB PC board (5).

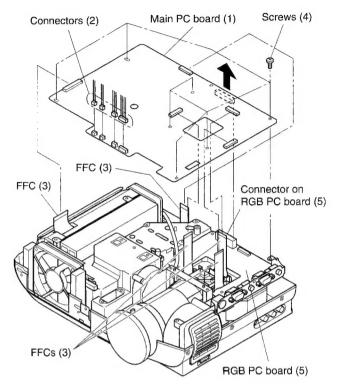

Fig. 1-3-4

3-5. RGB PC Board

- 1. Remove the FFC (1).
- 2. Remove four screws (2) and RGB PC board (3).
- 3. Remove four screws (4) and remove the cover (5) from the RGB PC board (3).

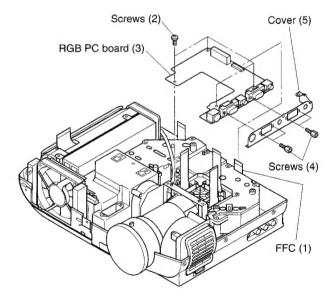

Fig. 1-3-5

3-6. Handle and Fan Assembly

- 1. Pull out the handle (1) upward.
- 2. Remove two screws (2) and fan assembly (3).
- 3. Remove two screws (4) and then remove the fan (5) from the fan bracket (6).

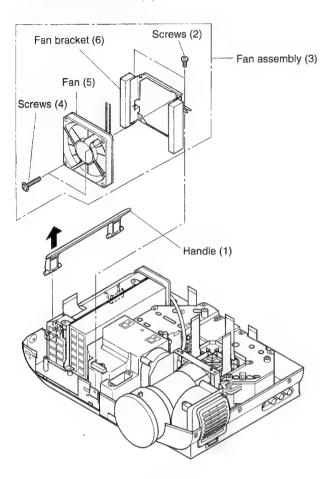

Fig. 1-3-6

3-7. Power Supply Unit

- 1. Remove two screws (1) and then remove the shield plate (2) and the socket (3). (Do not lose the shield plate (2).)
- 2. Remove two screws (4) and remove the power supply unit (5).
- 3. Remove two screws (6) and one screw (7) and remove the interlocking switch and plate (8).

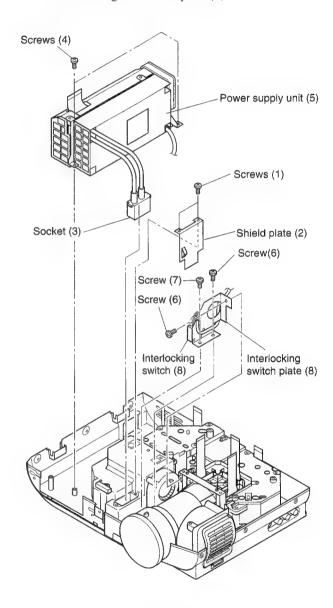

Fig. 1-3-7

3-8. Filter Assembly

- 1. Remove the filter cover (1) from the suction fan holder (2).
- 2. Remove the filters (3) and (4) from the filter cover (1). (When replacing and/or cleaning the filter, note the arrangement of the filters. Refer to Fig. A)
- 3. Remove two screws (5) and pull out the filter assembly (6) upward.
- 4. Remove two screws (7) and remove the fan (8).
- 5. Remove the suction fan mouse piece (9) from the suction fan holder (2).

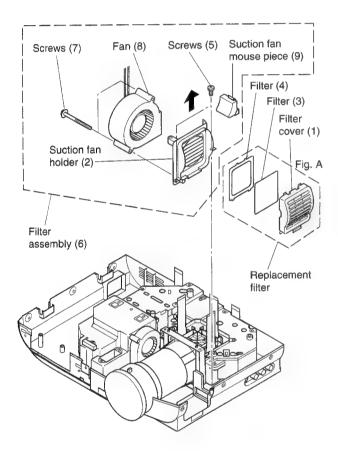

Fig. 1-3-8

3-9. Lamp House

- 1. Remove one screw (1) and (2) and then remove the lamp house (3).
- 2. Remove one screw (4) and then remove the temperature sensor switch (5).
- 3. Remove one screw (6) and then remove the fan (7).

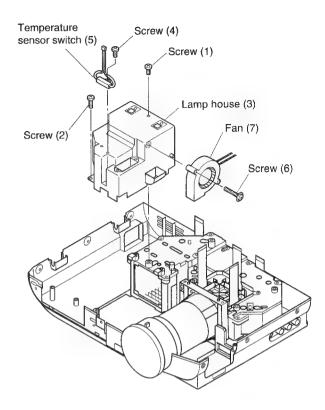

Fig. 1-3-9

3-10. Optical Engine

- 1. Remove four screws (1).
- 2. Remove the optical engine (2) by lifting upward.

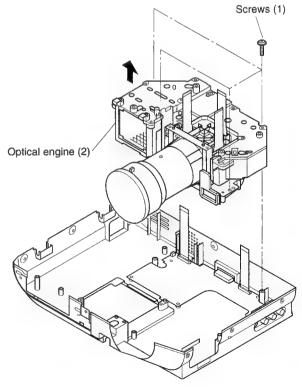

Fig. 1-3-10

3-11. Input PC Board

- 1. Remove five screws (1).
- 2. Remove the input PC board (2) by turning the arrow direction.

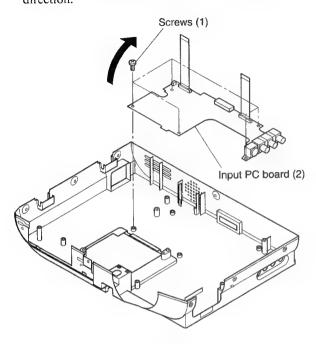

Fig. 1-3-11

3-12. Lens

1. Remove four screws (1) and then remove the lens (2).

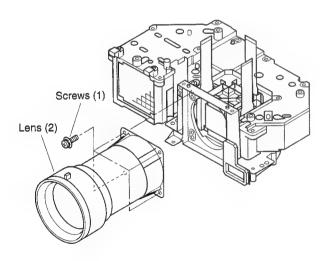

Fig. 1-3-12

3-13. Mirror Box

1. Remove three screws (1) and then remove the mirror box (2).

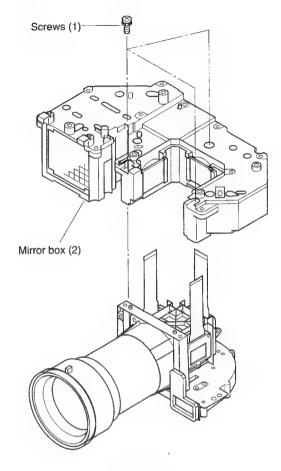

Fig. 1-3-13

3-14. LCD Block and LCD Panel

- 1. Remove three screws (1) and remove the LCD block (2).
- 2. Remove three screws (3) and remove the LCD panel (4).

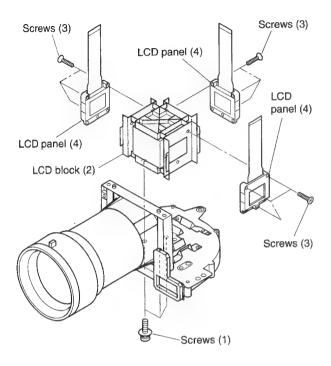

Fig. 1-3-14

3-14-1. Panel Replacement and Adjustment Procedures

< Replacement procedures >

- 1. Remove the prism block from the optical engine.
- 2. Remove the panel and the panel holder from the prism block. (Refer to Fig. 1-3-15.)

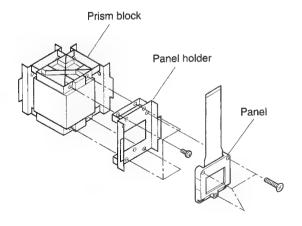

Fig. 1-3-15 Prism block exploded views

- 3. Mount a holder support for the service holder at the location of the panel holder removed. (Use screws removed in step 2.) (Refer to Fig. 1-3-16 for the following steps.)
- 4. Mount a new panel on the XY shifting plate with the Z rotation plate placed between them. (Use L upper and lower adjustment screws.) At this time, fix them so that two holes on the panel lower side are matched with the holes on the Z rotation plate.
- Mount the Z rotation plate on the holder support. (Use S adjustment screws.) Tighten the S adjustment screws lightly.

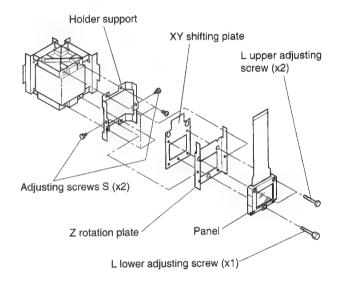

Fig. 1-3-16 Mounting view of a holder for service

< Panel adjustment procedures >

carried out with a cross hatch signal (RGB input) received.

(1) Panel focus adjustment

- carried out with a single color (panel color replaced) status.
- Shift the Z rotation plate by holding its handles located on the upper sides with fingers or a long-nose pliers, etc. and adjust to obtain the best focus at the whole screen. At this time, adjust the screen center focus by shifting the Z rotation plate entirely back and forth, the left/right screen focus balance by shifting the rotation plate to left/right rotation directions and the upper/lower screen focus balance by shifting it to upper/lower rotation directions.

 Tighten the S adjusting screws with a wrench for servicing and fix the Z rotation plate. (Refer to Fig. 1-3-17.) If the focus adjusted is upset when fixing, loosen the S adjusting screws and perform the adjustment in step 1 again.

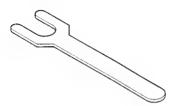

Fig. 1-3-17 Service wrench

3. Repeat the steps 1 and 2 until the Z rotation plate is fixed in the best focus condition. Finally, fix the Z rotation plate perfectly by tightening the S adjusting screws further with a long-nose plier, etc.

(2) Picture element adjustment (Convergence adjustment)

- Superimposing pictures on R and B panels with a picture on G panel.
- 1. Loosen the upper and lower L adjusting screws fixing the panel.
- Shift the XY shifting plate by holding its upper portion with fingers or a long-nose plier, etc. and adjust to superimpose the picture on the panel replaced on that of the G panel.
 - For the relation between the picture and the XY shifting plate shifting directions, the picture shifts to the left when the XY shifting plate shifts to the left seeing from the incident side of the panel (the picture shifts to the right when the XY shifting plate shifts to the right direction.), and the picture shifts to the lower direction when the XY shifting plate shifts to the upper direction (the picture shifts to the upper direction, when the XY shifting plate shifts to the lower direction.).
- 3. Fix the panel by tightening the upper/lower L adjusting screws with a wrench for servicing. If a focus is upset when fixing the panel, loosen the upper/lower L adjusting screws and perform the step 2 again.
- 4. Repeat the steps 2 and 3 until the panel is fixed with the picture superimposed in the best condition.

< Holder fixing >

- 1. Apply screw lock to the S adjusting screws.
- 2. Fix the Z rotation plate and the holder support, and the Z rotation plate to the XY shifting plate by using a silicone bond at the appropriate locations.

3-14-2. Mirror Adjustment Procedures (After polarizing plate replacement)

 Loosen screws fixing three mirror holder (WM, RM, BM).

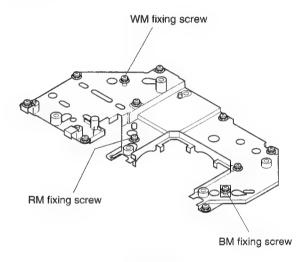

Fig. 1-3-18

- Set G single color screen. Move the WM fixing screw along the long hole and fix it where the upper and lower edges of the screen does not show the dark band.
- 3. Set R single color screen. Fix the RM fixing screw in the same way as shown in step 2.
- 4. Set B single color screen. Fix BM fixing screw in the same way as shown in step 2.
- 5. Apply screw lock to each fixing screw. (For the screw lock position, refer to the figure shown below.)

Fig. 1-3-19

3-15. CAM SW PC Board (Only for TLP451/651)

- 1. Remove one screw (1) and remove the cover (2).
- 2. Remove four connectors (4) connected to the CAM SW PC board (3).
- 3. Remove two screws (5) and remove the CAM SW PC board (3).

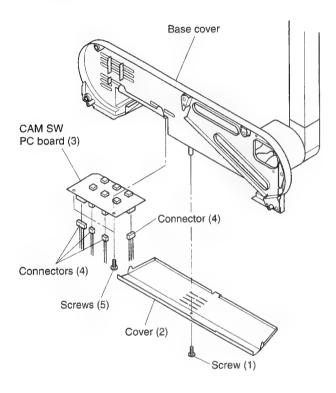

Fig. 1-3-20

3-16. Arm Assembly (Only for TLP451/651)

- 1. Remove three screws (1) and remove the arm assembly (2).
- 2. Pull out three connectors (3) connected from the arm assembly (2) from the base cover (4).

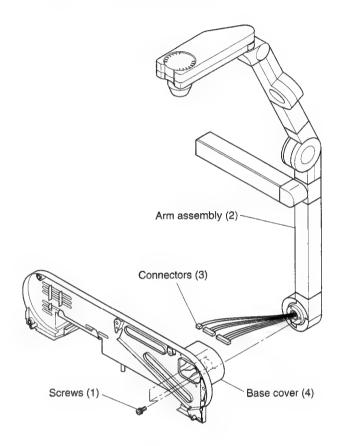

Fig. 1-3-21

3-17. Switch (Only for TLP451/651)

- 1. Remove two screws (1) and remove the base plate (2).
- 2. Remove one screw (3) and remove the switch (4).

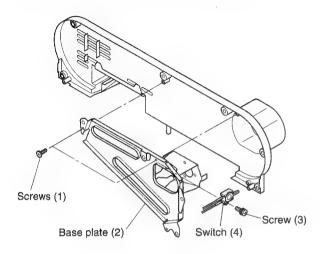

Fig. 1-3-22

3-18. Camera PC Board (Only for TLP451/651)

- 1. Remove four screws (1) and remove the cover (2).
- 2. Remove two connectors (3).
- 3. Remove two screws (4) and remove the camera block (5).
- 4. Remove the focus ring (6) by releasing the claws (A).
- 5. Remove two screws (7) and remove the camera base (9) from the camera PC board assembly (8).

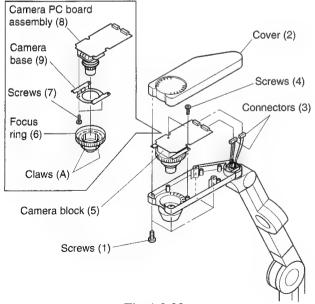

Fig. 1-3-23

3-19. Lamp PC Board (TLP451/651)

- 1. Remove the lamp cover (1).
- 2. Pull out the lamp PC board (2) in the arrow direction.
- 3. Unplug the connector (3).

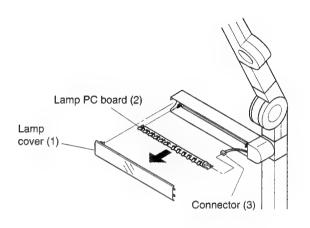

Fig. 1-3-24

4. ELECTRICAL ADJUSTMENT

< Test Equipments and Test Jigs >

- · Oscilloscope
- · Digital voltmeter
- Adjustment software TLP65CTLS.EXE
- Color luminance meter (BM-5)
- · Personal computer
- · Signal generator
- · Multi-point luminance meter

< Connection and Setting of Personal Computer >

(1) Connection of personal computer

 Connect a computer as shown in Fig. 1-4-1, and then perform the adjustment using the adjustment software TLP65CTLS.EXE. (When using a drive C, type C: \(\frac{4}{3}\)TLP65CTLS.EXE and press enter key.)

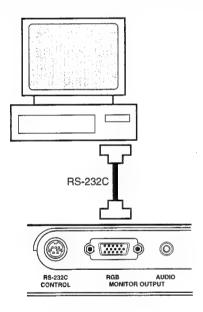

Fig. 1-4-1

(2) Adjustment software usage

The electrical adjustment is carried out by using the adjustment software. For the adjustment command items in the adjustment procedures, set the command by referring the following contents.

First, start the software and select the "Drive" tab. Then the following display appears.

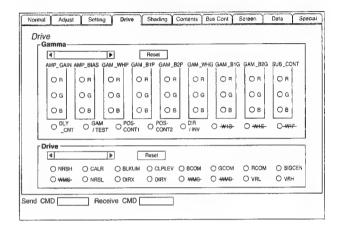

Fig. 1-4-2

The adjustment command setting enables to be carried out by clicking radio button(s) on this screen. The following list shows the adjustment command setting. By referring to the list, set the adjustment command.

	AMP_GAIN	AMP_BIAS	GAM_WHP	GAM_B1P	GAM_B2P	GAM_WHG	GAM_B1G	GAM_B2G	SUB_CONT

SECTION 2 SERVICING DIAGRAMS

1. PART CONFIGURATION AND THEIR SYMBOLS

1-1. Replacing Subminiature "CHIP" Parts

1-1-1. Required Tools:

- Fine tipped, well insulated soldering "pencil", about 30 Watts.
- 2. Tweezers.
- 3. Blower type hair dryer.

1-1-2. Soldering Cautions:

- 1. Do not apply heat for more than 3s.
- 2. Avoid using a rubbing stroke when soldering.
- 3. Discard removed chips; do no reuse them.
- 4. Supplementary cementing is not required.
- 5. Use care not to scratch or otherwise damage the chips.

1-1-3. Removal (Resistors, Capacitors, etc.):

1. Melt the solder at one side.

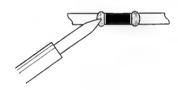

Fig. 2-1-1

2. Grasp the part with tweezers and melt the solder at the other side.

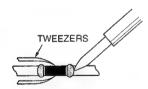

Fig. 2-1-2

3. Remove the part with a twisting motion.

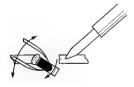

Fig. 2-1-3

1-1-4. Removal (Transistors, Diodes, etc.):

1. Melt the solder of one lead.

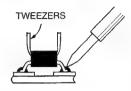

Fig. 2-1-4

2. Lift the side of that lead upward.

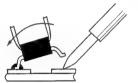

Fig. 2-1-5

3. Simultaneously heat solder the two remaining leads and lift part to remove.

Fig. 2-1-6

1-1-5. Preheating (Except for semiconductors):

Immediately before installing new resistors or capacitors, use a blower type hair dryer and preheat the part for about two min. at approximately 150°C.

1-1-6. Replacement:

1. Presolder the contact points of the circuit pattern.

Fig. 2-1-7

Press the part downward with tweezers and apply the soldering pencil as indicated in the figure.

1-2. Precautions for Part Replacement

- In the schematic diagram, parts marked
 \(\Delta \) (ex. \(\Delta \)
 F801) are critical part to meet the safety regulations, so always use the parts bearing specified part codes
 (SN) when replacing them.
- Using the parts other than those specified shall violate the regulations, and may cause troubles such as operation failures, fire etc.

1-6. Waveform and Voltage Measurement

- Measurement of waveform and voltage at each section in the color circuits was conducted with sufficient service color bar signal being received and reproduced in normal conditions.
- Waveforms and voltage values for the remaining circuit were measured with a broadcasting signal normally received, so they may vary slightly according to the programs being received. Use them as a measure for servicing.
- All voltage values except the waveforms are expressed in DC and measured by a digital voltmeter.

2. EACH SIGNAL FLOW

2-1. Operation at RGB Signal Input

The RGB signal is entered from PB001 on the RGB PC board and sent to the main PC board after passing through the MUTE circuit and the low pass circuit. The low pass circuit is provided to prevent a moire from occurring when the real sampling operation is not executed. Usually, a selector selects a signal not passed through the low pass filter, but selects the signal passed through the low pass filter since the real sampling is not carried out for a signal higher than SXGA85 Hz. The RGB signal entered passes through a buffer and develops PB003.

In the main PC board, the RGB input signal is converted to a digital signal in A/D+PLL (QD300). The A/D converter is used in the parallel mode, so the output becomes 16 bits per 1 channel and its clock rate is a half of the sampling clock. The digital RGB signal is enlarged or reduced by the scaller (QD500) and converted into a format of fv=60Hz, panel resolution (TLP65x: 1024x 768, TLP45x: 800 x 600). The scaller output signal is a RGB signal of 10 bits per 1 channel, converted into the analog signal by the D/A converter and fed to the drive circuit. The scaller (QD500) also performs the contrast/brightness control and keystone correction in addition to the enlargement or reduction process for the video signal entered.

The clock signal for the input system is generated in the A/D+PLL (QD300) and that for LCD panel drive system is in the 2nd PLL (QD402) circuit.

In the drive circuit, the pre-driver circuit amplifies the signal and performs a gamma correction. The correction signal sent from the color uniformity correction IC (Q971) enters the BIAS control terminal of the pre-driver (Q701) and the color uniformity is corrected by entering the correction signal corresponding to the screen position of the input signal. The signal corrected in the gamma is inverted its polarity and sampled & held in six phase signals by the sample & hold IC (Q401, Q501, Q601) and then fed to the LCD panel. The XGA panel used for TLP650/651 employs 12 phase driving system, so two sample & hold ICs are used per one channel. (Since TLP450/451 employs 6 phase driving system, one sample & hold IC is used per one channel.)

The panel driving timing signal is generated in the timing generator IC (Q203) with a clock signal and HD/VD signal supplied from the digital circuit. The Up/Down and Left/Right display inversion on the LCD panel (for ceiling mounting and rear projection status) is carried out by changing the timing signal generated by the timing generator. The timing signal used for this LCD panel requires a 15V in the amplitude, so the signal is converted into the timing signal of 15V amplitude by the level shifter and drives the LCD panel. The drive circuit operation is carried out in the same way regardless of the kinds of input signals. So the operation description for other input signals is omitted.

2-2. Video Signal

The video signals, S-video and composite video signals, are sent to the main PC board in passing through the input PC board through the connector and the buffers.

The signal sent to the main PC board enters the video decoder IC (QD200) and the decoder develops 8 bit signal (27 MHz clock) multiplexed with the Y/Cb/Cr components. The signal switching between S-video and composite video signals is carried out by a selector built-in the video decoder. The Y/Cb/Cr signal input for the scaller IC are 8 bit Y signal + 8 bit Cb/Cr signal. The 8 bit Y/Cb/Cr signal (27 MHz) in QD405 is converted into a 16 bit Y signal + Cb/Cr signal (13.5 MHz) and enters the scaller IC. In the scaller IC, the digital matrix circuit converts the Y/Cb/Cr signal into the R/G/B signals.

After that, the signal process is carried out in the same way as those for the RGB signal input. That is, the key stone correction, enlargement/reduction process and contrast/brightness control are carried out and fed to the drive circuit.

The process relating to the sync is also carried by the video decoder IC and the clock signal for input system is also generated.

Furthermore, when the video signal of fv=50Hz, such as PAL signal, etc. enters, the panel drive operation is carried out by using the signal of fv=50Hz.

2-3. Operation at Y/Pb/Pr Signal and HDTV Signal Input

Y/Cb/Cr signal (DVD player output) or HDTV signal enters from PB001 and reaches the A/D converter (QD100) for Y/Cb/Cr (Y/Pb/Pr) signal after passing through the low pass circuit. The A/D converter develops 16 bit signal of 8bit Y signal + 8bit Cb/Cr (Pb/Pr) and enters the scaller IC through the selector for the signal and that from the video decoder inside QD405. The process following to the scaller IC is the same as that of the video signal process.

The process relating to the sync process at Y/Cb/Cr signal (DVD player output) input (clock generation) is carried out by the video decoder and the clock generation at HDTV signal input is by the A/D+PLL (QD300).

2-4. Camera Input Operation

A camera input enters the A/D converter for Y/Cb/Cr (Y/Pb/Pr) signal through an exclusive connector and is processed as a Y/Cb/Cr signal input. The camera signal is a Y/Cb/Cr signal of $fh=11.8 \, kHz$ and $fv=15 \, Hz$.

The clock generation is carried out in the A/D+PLL (OD300).

2-5. Camera Overlay Signal

The camera overlay signal usually enters the A/D converter for Y/Cb/Cr signal (Y/Pb/Pr) through an exclusive connector in the same way as that of camera input.

The A/D converter output enters QD405 and the red and blue components of the signal are extracted by the level slice circuit. Thus processed signal is converted into the signal synchronizing with the LCD panel output timing by using a memory (QD46). Then the signal is overlapped with the on-screen signal and the signal overlapped is fed to the on-screen signal input of the scaller IC, and overlapped with the main video output signal. At this time, the clock generation for overlay signal input system is carried out by the PLL circuit exclusive for the overlay.

As described above, the A/D converter for Y/Cb/Cr (Y/Pb/Pr) signal is used for the overlay signal input, so the signal which is usually processed by the A/D converter for Y/Cb/Cr (Y/Pb/Pr) signal, that is, Y/Cb/Cr signal (DVD player output), cannot be overlaid at the HDTV signal input.

SECTION 3PARTS LIST

SAFETY PRECAUTION

The parts identified by \triangle mark are critical for safety. Replace only with part number specified.

The mounting position of replacement is to be identical with originals.

The substitute replacement parts which do not have the same safety characteristics as specified in the parts list may create shock, fire or other hazards.

NOTICE

The part number must be used when ordering parts in order to assist in processing, be sure to include the model number and description.

Parts marked # are of chip type and mounted on original PC boards.

However, when they are placed for servicing works, use discrete parts listed on the parts list.

SPECIFICATION

[Main Unit]

Power requirements	AC 100 – 240V 50/60Hz				
Power consumption	TLP450, TLP650: 220W				
	TLP451, TLP651: 235W				
Mass	TLP450, TLP650: 3.7 Kg				
	TLP451, TLP651: 4.5 Kg				
Dimensions	TLP450, TLP650: 318 x 87 x 232 (mm) (W/H/D) (Including the projecting sections)				
	TLP451, TLP651: 318 x 87 x 288 (mm) (W/H/D) (Including the projecting sections)				
Ambient environment	Temperature: 0°C to 35°C Humidity: 30% to 70% RH				
Lamp	UHP lamp 150W				
Speaker	1W (monaural)				
RGB INPUT	RGB signal: (D-sub 15-pin) Audio: 1V(p-p), more than 22kΩ, ø3.5mm stereo mini jack				
VIDEO INPUT	S-video signal: Mini DIN 4-pin				
	Video signal: 1V(p-p), 75 Ω				
	Audio: 1V(p-p), more than 22kΩ, RCA pin jack				
MONITOR OUTPUT	RGB signal: D-sub 15-pin				
	Audio: 1V(p-p), less than 2.2kΩ, ø3.5mm stereo mini jack				
CONTROL terminal	Mini DIN 8-pin (RS-232C)				
Cabinet Material	ABS resin				

[Liquid Crystal Display]

Projection system	3-pannels transmission		
Panel size	0.9 inches		
Driving system	TFT active matrix		
Picture elements	TLP650, TLP651: 786,432 pixels (1024 x 768 dots) x 3		
	TLP450, TLP451: 480,000 pixels (800 x 600 dots) x 3		

[Projection Lens]

Lens	Zooming lens F=1.8 - 2.1 f=36 - 47mm
Focusing	Manual operation
Zooming	Manual operation

[Document Imaging Camera]

Lens	F=1.8 - 2.3, f=5.8 - 23.2mm		
Focus	Manual operation		
Iris	Auto/Level adjustment allowed		
Image element	1/3 inch CCD		
Total picture elements	810,000 pixels		
Resolution	Horizontal 1024, vertical 768		
Lighting	TLP450E, TLP451E, TLP650E and TLP651E: LED light (Class 2)		
	TLP450U, TLP451U, TLP650U and TLP651U: LED light		

[Accessories]

Wireless remote control				
AA size battery				
Power cord				
Power cord				
RGB cable				
Adapter for Macintosh computers 1				
PC Audio cable				
Audio/Video cable				
Lens cover				
REMOTE MOUSE RECEIVER 1				
IBM/MAC mouse cable (for REMOTE MOUSE RECEIVER) 1				
PS/2 mouse adapter (for REMOTE MOUSE RECEIVER) 1				
MAC mouse adapter (for REMOTE MOUSE RECEIVER) 1				
USB mouse cable (for REMOTE MOUSE RECEIVER) 1				
Pointing rod1				
Carrying case
